*Cache Highline Water Association Bylaws, Article IX, 4e

Applicable Bylaws References – Article IX

4. Main Irrigation and Shareholder Systems; Title, Installation, Maintenance and Modification.

(e) Rules Applicable to Delivery Structures on the Open Canal Segment.

(2) No existing Delivery Structure on the Open Canal Segment shall be allowed to remain in place in such a manner as to hinder or otherwise interfere with the Association's right-of-way along the bank of a canal. In that regard, screening devices used around the inlet to the Delivery Structure shall not obstruct the flow of water in the canal, and in no case shall said screening devices extend more than three feet into the stream flow of the canal.

(3) No shareholder shall place any dam or check in a canal, for any purpose, without the express written approval of the Water Manager. Shareholders who have received approval for the use of a dam or check in a canal shall have the sole and separate responsibility to clean and maintain the same, at the shareholder's expense. In the event a shareholder shall fail to clean and maintain a dam or check as required herein, the Association shall remove the same at the shareholder's cost and expense. Shareholders who maintain dams or checks in a canal shall indemnify and hold the Association harmless from and against any claim, liability or damage to the canal and/or other property, real or personal, of the Association, its shareholders or any other person, and for injury to persons or animals, resulting from or arising out of the shareholder's use and maintenance of said dam or check.
